Confidential · For internal and client use only

1. Executive Summary

KLENTEC BMS is a fully offline-first Android Business Management System for a building-material retail business. Phase 1 is complete and ready to install on any Android phone.

The app covers the full daily cycle: role-based login, live dashboard, inventory, multi-item billing, customer credit tracking, supplier directory, cash flow, delivery management, employee attendance, and daily reports — all 100% offline.

Metric	Detail
Platform	Android — offline-first, no Play Store required
App Type	Standalone APK — install directly on device
Currency	Indian Rupee (₹) with Indian number formatting (1,23,456)
Roles	Admin, Employee, Delivery Staff
Modules Delivered	10 fully functional modules
Data Storage	Local SQLite database — zero internet dependency
Build Date	May 18, 2026
APK Status	✔ Built and ready to install
APK Download	https://expo.dev/artifacts/eas/ezf3J9x1bx4XU2LuULFQ3J.apk

2. What Was Built — Phase 1 Feature List

Core Infrastructure

- Expo SDK 54 + React Native 0.81.5 + TypeScript — production-grade mobile app
- Zustand state management with full SQLite offline persistence
 - Role-based PIN login — Admin (1234), Employee (2222), Delivery Staff (3333)
 - Professional Vyapar-inspired light theme — navy blue + orange CTA
 - INR ¹ currency with Indian locale formatting (1,23,456) throughout
 - Zero TypeScript errors — clean, maintainable codebase
 - EAS cloud build — standalone Android APK, no Play Store account needed

Module Summary

Module	Key Features Delivered	Status
Login	Role selector, 4-digit PIN, error feedback, sign-out	Complete
Dashboard	4 KPI stat cards, module grid, payment mix, operations, activity feed	Complete
Inventory	Add products, Stock In/Out, low-stock badge, search, price tracking	Complete
Billing	Multi-item invoices, live total, Cash/UPI/Credit, auto stock deduction, history	Complete
Customers	Add, credit balance, collect payment, purchase history, search	Complete
Suppliers	Directory, add form, Active/Inactive, materials, search	Complete
Cash Flow	Record expenses by category, net balance hero card (green/red), ledger	Complete
Reports	Sales, expenses, cash-in-hand, payment breakup, attention items	Complete
Deliveries	Create, Pending!'Dispatched!'Delivered, colour badges, summary counts	Complete
Employees	Add staff, daily attendance (Present/Half Day/Absent), payroll snapshot	Complete

3. Module-by-Module User Guide

Share this section with shop staff and managers. Every screen is covered below.

3.1 Login Screen

- Tap your role — Admin, Employee, or Delivery Staff.
- Enter your 4-digit PIN and tap "Unlock workspace".
 - Wrong PIN shows an error — re-enter the correct PIN.
 - Tap "Sign out" on the top-right of the Dashboard to log out.

3.2 Admin Dashboard

- Today's Sales — total from all invoices. Green = growing.
- Pending Deliveries — jobs not yet completed.
- Outstanding Credit — total owed by customers.
- Net Cash Flow — sales minus expenses. Green = profit, Red = loss.
 - Tap any module card to open it. Greyed-out = not yet active.
 - Recent Activity — live feed of last 5 actions across the app.

3.3 Inventory & Products

- Add Product: fill in Name, Category, Unit, Price (₹), Opening stock, Minimum stock !' Save.
- Stock In: tap green "Stock In", select product, enter quantity !' Confirm Stock In.
 - Stock Out: tap red "Stock Out", select product, enter quantity !' Confirm Stock Out.
 - Low Stock badge (red) appears when stock < minimum. Dashboard shows total count.
 - Use the search bar to find products by name or category.

3.4 Billing & Invoices

- Select a Customer from the chip list at the top.
- Select a Product and enter Quantity for Item 1.
 - Tap "+ Add Another Item" for a second or third product on the same invoice.
 - Select Payment Mode: Cash, UPI (enter ref ID), or Credit.
 - Review the Invoice Total in the blue box !' tap "Create Invoice".
 - Stock deducts automatically. Credit customers get balance added to their a

3. User Guide (continued)

3.5 Customers

- Add Customer: Name, Mobile, Address !' Save Customer.
- Collect Payment: select credit customer, enter amount received, select mode !' Collect.
 - Customer ledger shows red "Credit" or green "Clear" badge per customer.
- Last 3 invoices shown under each customer name for purchase history.
 - Search bar filters by name, phone, or address.

3.6 Suppliers

- Add Supplier: Name, Contact person, Mobile, Address, Category, Materials, Status !' Save.
 - Active = green badge, Inactive = red badge.
- Search by name, category, contact person, or materials.

3.7 Cash Flow & Expenses

- Record Expense: title, amount (₹), Category (Shop/Labour/Delivery/Purchase/Misc), Mode !' Save.
- Net Balance hero card at top: green = profit, red = loss.
 - Total Income (all invoices) - Total Expenses = Net Balance.

3.8 Daily Reports

- Cash In Hand — net balance, highlighted green or red.
- Sales, Expenses, Completed Deliveries count.
- Payment Mode Breakup — Cash / UPI / Credit with colour coding.
 - Attention Items — low stock, credit customers, pending deliveries.

3.9 Deliveries

- Create Delivery (Admin): Customer name, Items + quantity, Delivery person !' Create.
- Advance Status: Pending (amber) !' Dispatched (blue) !' Delivered (green).
 - Top cards show live Pending / Dispatched / Delivered counts.

3.10 Employee & Attendance

- Add Employee: Name, Mobile, Salary (₹/month), Role !' Add Employee.
- Today's Attendance: tap Present / Half Day / Absent for each employee — summary.
- Top summary: Present / Half Day / Absent / Unmarked counts for the day.
- Payroll Snapshot: total active employees and combined monthly salary.
- Employee Directory: all staff with role, phone, salary, and Active/Inactive.

4. Role-Based Access — Who Sees What

Each staff role has controlled access to protect sensitive business data.

Module	Admin	Employee	Delivery Staff
Login	' Full	' Full	' Full
Dashboard	' All modules	' Limited	' Limited
Inventory	' Add + Adjust	' View only	' No access
Billing	' Full	' Full	' No access
Customers	' Full	' Full	' No access
Suppliers	' Full	' No access	' No access
Cash Flow	' Full	' No access	' No access
Reports	' Full	' No access	' No access
Deliveries	' Create + Track	' View + Advance	' Own jobs
Employees	' Full	' Attendance	' No access

5. APK Installation Guide

Standalone APK — no Play Store or internet needed after install.

Step 1 — Download on your Android Phone

- Open this link on your phone:
<https://expo.dev/artifacts/eas/ezf3J9x1bx4XU2LuULFQ3J.apk>
- Or send the link to yourself via WhatsApp and tap it from the chat.

Step 2 — Allow Installation

- Settings ! Security ! Enable "Install unknown apps" or "Install from unknown sources".
- On Android 10+: tap the APK ! Settings ! Allow from this source ! go back ! install.

Step 3 — Install

- Open Downloads folder, tap the APK file, tap "Install", wait 10–30 seconds.
- Tap "Open" to launch KLENTEC BMS.

Step 4 — First Launch

- Loading screen for 2–3 seconds while setting up the local database.
- Login screen appears — use the PINs from Section 6 below.
 - All data stored locally — no internet required after installation.

Troubleshooting

- "App not installed" ! Enable "Install from unknown sources" in Settings.
- "Parse error" ! Re-download the APK and try again.
- App crashes on first open ! Uninstall, reinstall, allow all permissions.

6. Demo Login Credentials

& Change all PINs before deploying to real staff. Do not share the Admin PIN with floor staff.

Role	PIN	Access Level
Admin	1234	Full access to all 10 modules — billing, reports, suppliers, employees, cash flow.
Employee	2222	Dashboard, Billing, Customers, Deliveries, Attendance marking.
Delivery Staff	3333	Dashboard and Deliveries only — can advance delivery status.

7. Technical Architecture

For the development team and technical stakeholders.

Layer	Technology
Framework	Expo SDK 54 + React Native 0.81.5
Language	TypeScript 5.9 — strict mode, zero errors
UI	React Native StyleSheet — Vyapar-inspired light theme, no external UI library
State	Zustand 5 — centralized store, 13 business actions
Persistence	expo-sqlite 16 (native Android) + AsyncStorage (web fallback)
Navigation	@react-navigation/native-stack — role-gated screen routing
Build	EAS Build cloud — standalone Android APK output
Currency	INR ¹ via toLocaleString("en-IN") — correct lakh/crore formatting

Key Source Files

- src/theme.ts — global colour palette (navy, orange, green, red)
- src/types.ts — all shared TypeScript types (13 types)
- src/utls/finance.ts — money formatting and calculation utilities
- src/data/mockData.ts — Indian seed data (products, customers, suppliers, employees)
- src/data/database.ts — SQLite schema, seeding, snapshot load, all 11 persist fun
- src/store/useAppStore.ts — full Zustand store with all 13 business actions
- src/screens/ — 10 screen files (Login, Dashboard, Inventory, Billing, Customer Reports, Deliveries, Employees)
- src/components/ — 4 shared components (ScreenShell, SectionCard, Stat

8. Data & Offline Storage

- Products, Customers, Suppliers, Invoices, Expenses, Deliveries, Employee
- Data saved after every action — no manual Save button needed.
- Closing and reopening the app restores all data exactly as it was.
- Data persists across app updates — only lost if app is uninstalled.

& Uninstalling the app deletes all local data. Back up key records before uninstalling.

- Phase 2 will add one-tap CSV export to Downloads folder for daily backup.

9. Phase 2 Roadmap

Planned for the next delivery phase. Phase 1 is stable and tested — these features are next.

Feature	Description	Priority
CSV Export	Export invoices, expenses, stock to Excel CSV in Downloads.	High
Thermal Printing	Print receipts to Bluetooth thermal printer from Billing.	High
Edit & Delete	Edit or delete products, customers, suppliers, expenses.	High
Purchase Orders	Create purchase orders linked to suppliers, update stock on receipt	Medium
Date Filters	Filter invoices/expenses by today / this week / custom range.	Medium
Credit History	Full ledger of all payments received from credit customers.	Medium
Salary Disbursement	Mark monthly salary as paid, linked to expense ledger.	Medium
Stock History	Full log of every stock-in and stock-out event per product.	Low
WhatsApp Sharing	Share invoice details to customer WhatsApp from Billing screen.	Low
Multi-Device Sync	Optional cloud sync so multiple phones share the same data.	Low

10. Important Notes for Client

Before Going Live with Real Data

- Change all staff PINs from demo values (1234, 2222, 3333) to private PINs.
- Replace seed products (UltraTech Cement, TMT Bar etc.) with your actual product catalog.
- Add your real customers, suppliers, and employees using the in-app forms.
- Do a test run: create a sample invoice, record an expense, advance a delivery, mark attendance.
- Confirm Dashboard numbers are correct before using for real transactions.

Device Requirements

- Android 8.0 or higher (most phones from 2018+ are compatible).
- Any Android phone — Redmi, Realme, Samsung, Vivo, Oppo etc.
- Minimum 2 GB RAM recommended. App size: ~60–80 MB after install.
- No internet connection required after installation.

Data Backup (Until Phase 2)

- Data is on the device — keep the device safe and charged.
- Do not factory reset without noting key records manually.
- Phase 2 will add one-tap CSV export to Downloads for daily backup.

Support & Updates

- For bugs or new feature requests — contact the development team.
- For APK reinstall: use the same download link from Section 5.
- For newer APK after updates: a new build link will be shared by the team.
