Phase 2 Sprint 1 Development Report

Full Edit/Delete CRUD Implementation

Date: June 5, 2026

Status: READY FOR CLIENT TESTING

This report summarizes Phase 2 Sprint 1 development, which adds comprehensive Edit/Delete functionality across all major modules while maintaining the professional EZO/OKCredit-inspired UI.

Executive Summary

Phase 2 Sprint 1 focuses on completing CRUD workflows by implementing Edit and Delete functionality across Inventory, Billing, Customers, and Deliveries modules.

Key Achievements:

- ' Full Edit/Delete for 4 core modules
- ' Smart validation and data protection
- ' Stock reversal on invoice deletion
- ' Clean, minimal UI (EZO/OKCredit style)
- ' Zero TypeScript errors
- ' New APK ready for download

APK Download:

<https://expo.dev/artifacts/eas/qGQi3hiC7tNeYZwekuwtpD.apk>

Module 1: INVENTORY

' EDIT:

- Product name, category, unit
- Price (in ¢), opening stock, minimum stock
- Modal dialog with form fields

Ø=ÝÑ DELETE:

- Remove product with confirmation
- Activity log records deletion

Testing Steps:

- 1. Go to Inventory !' Product List
 - 2. Click ' on any product
 - 3. Edit price or name in modal
 - 4. Click "Save Changes" — observes update
 - 5. Click Ø=ÝÑ on another product
 - 6. Confirm deletion — product removed
- ' Key point: Deleted products cannot be recovered — prevents accidental deletes with confirmation.

Module 2: BILLING

' EDIT:

- Payment Mode (Cash / UPI / Credit)
- UPI Reference ID / Transaction ID
- Does NOT edit items (complex stock impacts)

Ø=ÝÑ DELETE:

- Remove invoice and reverse all impacts:
 - • Stock restored to inventory
 - • Customer credit balance cleared
 - • Activity log tracks deletion

Testing Steps:

1. Go to Billing !' Recent Invoices
 2. Click ' on an invoice
 3. Change payment mode to UPI, add reference
 4. Click "Update Invoice" — details change
 5. Click Ø=ÝÑ on invoice
 6. Confirm !' invoice removed, stock restored
- ' Key point: Deleting an invoice automatically reverses stock impact, maintaining inventory accuracy.

Module 3: CUSTOMERS

' EDIT:

- Customer name, phone, address
- Modal dialog for editing contact details

Ø=ÝÑ DELETE (Protected):

- Can ONLY delete if outstanding balance = 0
- Prevents losing credit tracking
- Shows error if customer owes money

Testing Steps:

1. Go to Customers !' Customer Ledger
 2. Click ' on a customer
 3. Update phone or address
 4. Click "Save Changes" — details update
 5. Try deleting customer with balance
 6. Error: "Cannot delete (balance outstanding)"
 7. Collect payment, then delete succeeds
- ' Key point: Smart validation prevents losing unpaid customer balances — data protection.

Module 4: DELIVERIES

' EDIT:

- Customer name, items, assignee, status
- Can edit at any status (Pending/Dispatched/Delivered)

Ø=ÝÑ DELETE:

- Remove delivery from queue
- Activity log records deletion

Testing Steps:

- 1. Go to Deliveries !' Delivery Queue
 - 2. Click ' on a delivery
 - 3. Update items or assignee
 - 4. Click "Save Changes" — delivery updates
 - 5. Click Ø=ÝÑ to delete
 - 6. Confirm !' delivery removed from queue
- ' Key point: Edit/Delete work at any delivery status for maximum flexibility.

UI/UX Design Principles

All Edit/Delete interfaces follow EZO/OKCredit design philosophy:

Action Buttons:

- ' Pencil button = Click to edit
- Ø=ÝÑ Trash button = Click to delete
- Located on right side of each row for quick access
- Small, non-intrusive icons maintain clean layout

Edit Modals:

- Blue header: "Edit [Module Name]"
- Form fields pre-filled with current data
- Cancel button (gray) cancels without saving
- Save button (navy blue) saves changes

Delete Confirmations:

- Browser dialog: "Delete [Name]? This cannot be undone."
- Prevents accidental deletions
- Success message confirms deletion

Testing with Demo Accounts

Login PINs:

- Admin: 1234 (full access)
- Employee: 2222 (operations access)
- Delivery Staff: 3333 (delivery access)

Seed Data Available:

- Products: UltraTech Cement, TMT Bar, Asian Paints, Tiles
- Customers: Sharma Construction, Patel Interiors, Shree Developers
- Deliveries: Pre-created jobs in Pending/Dispatched status
- Employees: Ramesh, Sunil, Priya, Mohan

How to Test:

1. Download APK from link above
2. Install on Android phone
3. Open app, select role (Admin recommended)
4. Enter PIN (1234)
5. Explore each module using Edit/Delete buttons
6. Provide feedback on ease of use

Technical Implementation

Code Quality:

- TypeScript: 0 compilation errors
- Zustand Store: 8 new action methods
- SQLite: Persistent storage with activity logs
- React Navigation: No route changes needed

Modified Files:

- src/store/useAppStore.ts (+ 100 lines)
- src/screens/InventoryScreen.tsx (+ 80 lines)
- src/screens/BillingScreen.tsx (+ 90 lines)
- src/screens/CustomersScreen.tsx (+ 85 lines)
- src/screens/DeliveriesScreen.tsx (+ 75 lines)

Git Commit:

90cd5cd — feat: Phase 2 Sprint 1 — Full Edit/Delete CRUD

Phase 2 Sprint 2 — Coming Next

Based on your feedback, Sprint 2 will prioritize:

High Priority:

- Daily Balance Ledger for Customers (track yesterday/today balance)
- Filtering & Date Ranges (filter invoices by date/customer/mode)

Medium Priority:

- Admin Approval Panel (for price changes)
- Employee Commission Tracking (calculate & pay commissions)

Your Feedback Needed:

- Which feature is most important for your business?
- Are Edit/Delete buttons easy to use?
- Any bugs or issues discovered during testing?
- Features from other apps you'd like added?

Support & Quick Reference

Installation:

- Download APK !' Open with Android !' Install (Allow unknown sources)

Offline Mode:

- Disconnect WiFi after login — app works completely offline
- Data syncs when reconnected (in future versions)

Activity Log:

- Dashboard !' Recent Activity shows all Edit/Delete actions
- Useful for audit trail and verification

Reset:

- Uninstall app completely to reset all data
- Reinstall from APK for fresh start
